OPERATING PRINCIPLE

- Solenoid operated directional control valves with monitored spools are supplied with an inductive proximity sensor signalling the valve spool position (the case of pilot operated directional control valves the main spool is monitored).
- The PNP sensor with closed contact signals the position of the spool at rest (de-energized solenoid valve), recognizing the state of the directional control valve if connected to an electronic card, and controlling the combined function (see paragraph 5.3).
- The valves of sizes ISO 4401-03 (CETOP 03) and ISO 4401-05 (CETOP 05) are direct operated while sizes CETOP P05, ISO 4401-07 (CETOP 07) and ISO 4401-08 (CETOP 08) are pilot operated.
- They are supplied with oil bath solenoids and only in direct current versions (see paragraph 5.2 for available voltages).
- As for the type and choice of the available spools see par 1.

A wide range of configurations and different solenoid operated - hydropiloted directional control valve spool positions at rest are available:

- Type S*: 4-way, 3-position directional control valve, 2 solenoids; positioning of spool at rest is obtained by centering springs.
- Type SA* and SB*: 4-way, 2-position directional control valve, 1 solenoid; positioning of spool at rest is obtained by centering springs. For DS3M and DS5M only.
- Type "T*": 4-way, 2-position directional control valve with 1 solenoid; for piloted versions positioning of the spool at rest is determined hydraulically by the pilot valve and mechanically (even without pressure) by the main stage return spring.

1.6 - Spool type for E4P4M - E07P4M - E5P4M solenoid valves

2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V).

For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

5 - ELECTRICAL FEATURES

5.1 Solenoids

These are essentially made up of two parts: tube and coil. The tube is threaded into the valve body and includes the armature that moves immersed in oil, without wear. The inner part, in contact with the oil in the return line, ensures heat dissipation.

The coil is fastened to the tube by a threaded ring, and can be rotated and locked to suit the available space.

NOTE 1: In order to further reduce the emissions, use of type H connectors is recommended. These prevent voltage peaks on opening of the coil supply electrical circuit (see catalogue 49 000).

NOTE 2: The IP65 protection degree is guaranteed only with the connector correctly connected and installed.

11 - OPTIONS

11.1 - Control of the main spool shifting speed

By placing a MERS type double flow control valve between the pilot solenoid valve and the hydropiloted valve, the piloted flow rate can be controlled and therefore the change over smoothness can be varied.

Add the letter **D** to the identification code to request this device (see paragraph 1.5).

11.3 Subplate with throttle on line P

It is possible to introduce a subplate with a restrictor of $\varnothing 0,8$ on line P between the pilot solenoid valve and the main distributor. The subplate thickness is 10 mm.

Add **PF** to the identification code to request this option (see paragraph 1.5).

12 - ELECTRIC CONNECTORS

12.1 - Proximity sensor connectors

Connectors for proximity sensors must be ordered separately, by specifying the descriptions here below, depending on the type of valve ordered.

CONNECTOR FOR DS3M AND DS5M

description: ECM3S / M8L / 10

Connector: pre-wired connector M8 - IP67

Cable: with 3 conductors 0.34 mm^2 - length 5 mt - cable material: polyurethane resin (oil resistant)

Without LED. Leds are placed straight on the proximity sensor.

CONNECTOR FOR E4P4M, E07P4M AND E5P4M

description: ECM3S / M12L / 10

Connector: pre-wired connector M12 - IP68

cable: with 3 conductors 0.34 mm^2 - length 5 mt - cable material: polyurethane resin (oil resistant)

LEDs:

GREEN LED: show the presence of power supply voltage to the connector. If the LED is off, the connector is not supplied.

YELLOW LED: show the valve condition:

- valve at rest yellow LED on - green LED on
- switched valve yellow LED off - green LED off

12.1 - Coil connectors

Connectors are never supplied with the solenoid valves, but they must be ordered separately.

For the identification of the connector type to be ordered, please see catalogue 49 000.

13 - INSTALLATION

The valves can be installed in any position without impairing correct operation.

Valve fastening takes place by means of screws or tie rods, laying the valve on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing.

If the minimum values of planarity or smoothness are not met, fluid leakages between valve and mounting surface can easily occur.
