Company Profile

ES Escalator & Elevator Parts is a professional supplier of the Escalator Spare Parts Since 2006, and we are spreading to elevator spare parts supply from 2018.

We sell high quality parts made from OEM specs, Escalator spare parts including Escalator Step, Escalator Step Chain, Comb plates, Demarcations, Newel Rollers, Wheels, Handrail components, Balustrade components, Electrical components etc. Elevator spare parts including Button, PC board, Door vane, Hall call, Safety light curtain, Inverter, Traction machine etc.

We are cooperating with CNIM / THYSENKRUPP / OTIS / KONE / SCHINDLER / O&K / Hyundai / LG&SIGMA / SJEC / Mitsubishi / Hitachi / BLT / CANNY/ KOYO / Fujitec / XIZI OTIS branches' maintenance department and LOCAL escalator & elevator Maintenance Company in many countries or areas. Also, we are the spare parts direct supplier of the Metro system in many countries.

Our dedication to providing cost effective, sustainable solutions on time and to budget is the bench mark to our approach in providing the correct solution to all your escalator and elevator needs.

Whether you need to buy a product, clean it up, or repair it, contact us today. Please visit our website (www.es-escalatorpart.com) and find the part you need.

Our Parts:

Sourcing from OEM factory, Standard: EN115:2012, ASME 17.1.

Our key members have over 14 years' work experience in the escalator and elevator components' factory. We have a global view & knowledge of the Escalator and Elevator Maintenance and Service Business.

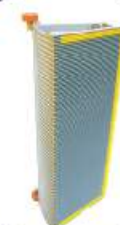

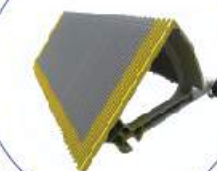

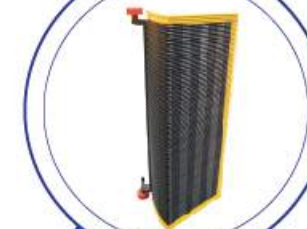

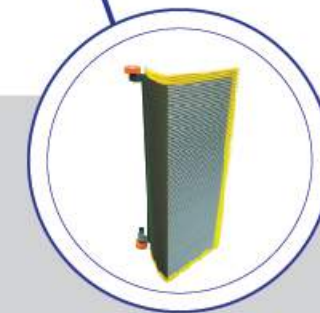

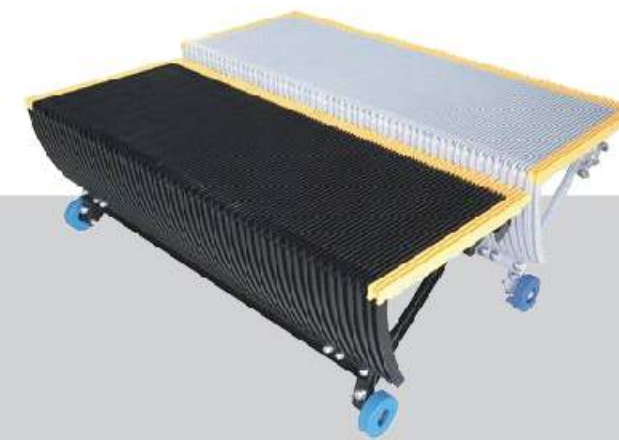

Our Advantage:

- ONE STOP SHOP.
- Original Parts
- Good Quality
- Competitive Cost
- Professional Sourcing Team.

HANDRAILS

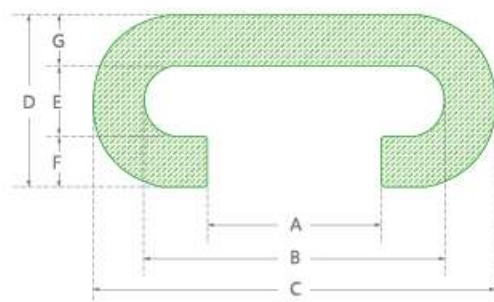

Parts classification

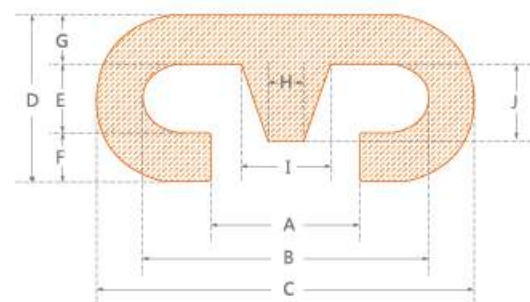

Model Specifications

The following diagrams are ES's recommended handrail designs, C-type and V-type handrails. A properly functioning and fitted handrail must have appropriate interplay between the guide element and drive mechanism of the escalator. The most important design dimensions are inner width (B), inner height (E) and lip width (A). The following cross-sectional diagrams and tables provide references for the appropriate values necessary for your system. Alternate designs should be discussed with SKG technicians on a case-by-case basis.

Selection of Sliding Layers & Cover Materials

Severe operating conditions (extreme temperatures, direct weathering, high ozone concentration, nonstop operation, soiling) damage handrails and reduce life expectancy.

Increased handrail durability can be achieved by selecting appropriate sliding layers and cover materials.

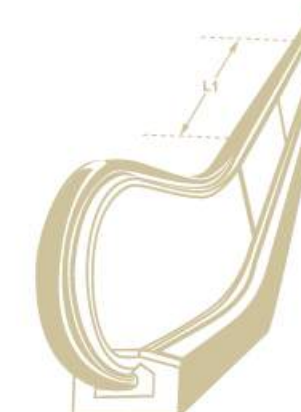

Environmental Conditions	Indoor	Semi-outdoor	Outdoor	Outdoor(Tropics)
Applications	Shopping malls, Super markets	Subways, Covered bus stops, Skywalks	Uncovered entrances of subways, Pedestrian overpasses	Outdoor applications at high humidity and temperature

Abrasion on Handrail Guide	Low	High
Fabric Joints	2 joints of sliding layers for long handrails and more for drums	Diagonally cut sliding layers, Joints every 2 m

Measurement of Handrail Length

Procedure for measuring the required handrail length:

- Length measurements are taken only on straight handrail sections L1.
- Do not measure the top or bottom curves.
- Mark the start point and the end point and measure the length L1.
- Run the escalator until the end point mark reaches the start point position.
- Mark and measure the new length L2.
- Repeat the procedure until the starting mark appears at the initial end point position.
- The sum of all measurements (L1, L2, L3, ... Ln) gives the actual length of the handrail.
- Check the position of the handrail length compensation device. This must be taken into account when determining the required handrail length. If this device is on minimum, add the length and vice versa.
