

DIN rail mounting double action controller with analogue output, delta**due**[®] series **D3 line**

Continuous control on DIN rail

The delta**due**[®] series includes one of the most advanced line of DIN rail mounting controller modules. The D3 line can satisfy almost every control application with the following features:

- Common bus for power supply and serial communications
- Totally withdrawable
- Easy replacement without switching off the power supply
- Digital input for remote commands
- Timer and Start-Up function
- Automatic tuning
- Open/Stop/Close output for electric actuators
- Singol action as well as heat/cool control
- Full integration with the delta**due**[®] series data acquisition and control modules
- Easy integration with PC and PLC system
- Easy and simplified installation and maintenance

E

ISO 9001 Certified

delta^{due}[®]

distributed control/acquisition

Advantages and peculiarities

Keeping costs low

- Modular construction and compact dimensions
- Quick mounting on DIN rail
- Possibility of prewiring
- Common bus for power supply and serial communications

Wiring error reduction

- Polarised connectors
- Coloured Terminal identification

High integration

- Mounting on the machine or real panel
- Remote/centralised control
- RS485/CanBus
- Communications interface

Easy maintenance

- Withdrawable
- Easy replacement without switching off the power supply

Typical applications

Local control with operator panel OP30

Distributed control with PLC and with dedicated modules for critical loops

Distributed control with PC supervision

Fuzzy tuning with automatic selection

Technical data

Features at env. 25°C	Description		
Total configurability	By means of the configuration tool it is possible to select: - type of input - the type of control input - type of output - type and functionality of the alarms - type of Setpoint - control parameter values		
PV input	Common characteristics	A/D converter with resolution of 50000 points Update measurement time: 0.2 s Sampling time: 0.5 s Input bias: - 60...+ 60 digit Input filter: 1...30 s OFF = 0	
	Accuracy	0.25% ±1 digit (for temperature sensor) 0.1% ±1 digit (for mA e mV)	Between 100...240Vac the error is minimal
	Resistance thermometer (for ΔT: R1+R2 must be <320Ω)	Pt100Ω at 0°C (IEC 751) °C/°F selectable	2 or 3 wires connection Burnout (with any combination) Line: 20Ω max. (3 wire) Input drift: 0.35°C/10°C Env. Temp. <0.35°C/10Ω Wire Res.
	Thermocouple	L, J, T, K, S, R, B, N, E, W3, W5 (IEC 584) °C/°F selectable	Internal cold junction compensation with NTC Error 1°C/20°C ±0.5°C Burnout Line 150Ω max. Input drift: <2μV/°C Env. Temp. <5μV/10Ω Wire Res.
	DC input (current)	0/4...20mA, 2.5Ω ext. shunt Rj >10MΩ	Burnout. Engineering units, decimal point position configurable low range: -999...9999 high range: -999...9999 (min. range of 100 digits)
	DC input (voltage)	10...50mV, 0...50mV Rj >10MΩ	Input drift: <0.1%/20°C Env. Temp. <5μV/10Ω Wire Res.
Digital input	The closure of external contact produces any of the following actions: Auto/Man mode change, Stored Setpoints activation, measure hold, Timer activation (if option installed)		
Operating mode	1 single or double action PID loop or ON/OFF with 1, 2 or 3 alarms		
Control mode	Algorithm	PID with overshoot control or ON/OFF PID with valve algorithm, for controlling motorised positioners	
	Proportional band (P)	0.5...999.9%	OFF=0
	Integral time (I)	0.1...100.0 min	
	Derivative time (D)	0.01...10.00 min	
	Error dead band	0.1...10.0 digit	
	Overshoot control	0.01...1.00	Singol action PID algorithm
	Manual reset	0.0...100.0%	
	Cycle time (Time proportioning only)	1...200 s	
	Control output high limit	10.0...100.0%	
	Soft-start output value	0.1...100.0% OFF=0	
	Output safety value	0.0...100.0% (-100.0...100.0% for Heat/Cool)	On/Off algorithm
	Control output hysteresis	0.1...10.0%	
	Dead band	-10.0...10.0%	
	Relative cool gain	0.1...10.0	Double action PID algorithm (Heat/Cool) with Overlap
	Cycle time (Time proportioning only)	1...200 s	
	Control output high limit	10.0...100.0%	
	Cool output hysteresis	0.1...10.0%	Valve drive PID algorithm without feedback potentiometer
	Motor travel time	15...600 s	
	Motor minimum step	0.1...5.0%	

Fuzzy-Tuning

Two methods of tuning are available:

- **Auto-Tuning "one shot"**

- **Natural frequency "one shot"**

The **Fuzzy-Tuning** automatically selects one of the two methods which assures the best result for each condition.

The **Auto-Tuning** method works best on the step response basis.

When activated, if a deviation exists between the Setpoint and process variable larger than 5% of scale range, the controller modifies the output value. Then, in a short time, it calculates the PID parameters and the new algorithm is operational immediately.

The main advantages of this method are fast calculation and quick implementation.

The **Natural frequency** method works best when the process variable is very near to the Setpoint. When activated, it causes a process oscillation around the Setpoint value.

The main advantage of this method is a reduced disturbance to the process.

Heat/Cool control

By a sole PID control algorithm, the controller handles two different outputs, one of these performs the Heat action, the other one the Cool action. It is possible to overlap the outputs. The Cool action can be adjusted using the relative cool gain parameter. The Heat and Cool outputs can be limited separately.

Technical data

Features at env. 25°C	Description		
OP1-OP2 outputs	SPST Relay NO, 2A/250Vac (4A at 120 Vac) for resistive load SSR, 1A/250Vac for resistive load To meet the double isolation requirements, OP1 and OP2 must have the same load voltage		
OP3 output	SPST Relay NO 2A/150Vac for resistive load		
OP4 output	Logic not isolated: 0/5Vdc, $\pm 10\%$ 30 mA max.		
OP5 Analogue output (option)	Control or PV/SP retransmission	Galvanic isolation: 500Vac/1 min Resolution: 12 bit Accuracy: 0.1%	In current: 0/4...20mA, 750 Ω /15V max.
AL1- AL2 - AL3 alarms	Hysteresys	0.1...10.0%	
	Action	Active High	Deviation threshold $\pm$ range
		Active low	Band threshold 0...range
		Special functions	Absolute threshold whole range
Setpoint	Local	Up and down ramps 0.1...999.9 digit/min (OFF=0)	
	Local plus 2 stored with tracking or Stand-by	Low limit: from low range to high limit. High limit: from low limit to high range	
Special functions (options)	Timer	Automatic start at the power on, manual start by digital inputs or serial comm.s Setting time: 1...9999 s/min Stand-by Setpoint: $SLH \leq SP \leq SLH$	
	Start-up	Start-up Setpoint: $SLH \leq SP \leq SLH$ Hold time: 0...500 min Control output high limit: 5.0...100.0%	
One shot Fuzzy-Tuning	The controller selects automatically the best method according to the process conditions		One shot Auto Tuning One shot Natural Frequency
Auto/Man station	Standard with bumpless function, by digital input or serial communications		
Serial Comm.s	RS485 isolated, Modbus/Jbus RTU protocol, 1,200, 2,400, 4,800, 9,600 bit/s, two wires		
Auxiliary Supply	+24Vdc $\pm 20\%$ 30mA max. - for external transmitter supply		
Operational Safety	Measure input	Detection of out of range, short circuit or sensor break with automatic activation of the safety strategies	
	Control output	Safety value: -100...100%	
	Parameters	Parameter and configuration data are stored	
	Outputs lock	in a non volatile memory for an unlimited time	
General characteristics	Power supply (PTC protected)	24Vac (-25...+12%) 50/60Hz and 24Vdc (-15...+25%)	Power consumption 3W max.
	Safety	EN61010-1 (IEC1010-1), installation class 2 (2.5kV) pollution class 2, instrument class II	
	Electromagnetic compatibility	Compliance to the CE standards	
	UL and cUL approval	File E176452	
	Protection	Terminal strip IP20	
	Dimensions	Pitch: 22.5 mm - depth: 114.5 mm - width: 53 mm	
	Weight	161 g approx.	

Digital input

The digital input can be configured to have one of the following functions:

- Measure hold
- Auto/Man switching
- Stored Setpoint activation
- Timer activation

Special functions

To improve the instrument performance and to reduce the wiring and installation costs, two special functions are available:

- Start-up

- Timer

The use of these functions avoids additional device installation (e.g. external timer), therefore allowing a significant costs reduction.

Moreover there are

- **Output lock** function,
- The outputs can be switched to the OFF status via serial communications.

Technical data

Features at env. 25°C	Description			
Functions	Manager	OFF line configuration and parameterization. Backup of the configuration and parameter data of the connected modules. Hot swapping, automatic configuration and parameterization of the replaced modules		
	Gateway	Network adapter for Profibus DP, DeviceNet, Modbus RTU and RS485/RS232 converter		
Communications ports	Instruments Bus	RS485 Modbus protocol master replicated on the terminal connectors (max. 19200 baud)		
	Support	RS485, RS232 Modbus RTU protocol slave, isolated (max. 38400 baud)		
	Fieldbus	RS485 Modbus RTU protocol slave, isolated (max. 57600 baud)		
		Profibus DP slave	DP control: SPC3	
			DP interface: RS485 isolated, max. 12 Mb/s	
CAN 2.0b, isolated, max. 1Mb/s (for DeviceNet)				
General characteristics	See the entry “General characteristics” of the other module for details
