

OxyTrans

4 – 20 mA Loop Powered two wire
Oxygen Transmitter

Two Wire Process Oxygen analyzer

The Model OxyTrans is simple, accurate and economic measurement of Oxygen at trace and % levels.

A simple Display and one point calibration allow easy and fast start-up of the instrument.

optional  1/2 G Ex ia IIC T4 (ATEX)

☺ One User specific measuring range

The unit will be available with ranges between 0-10 ppm and 0 – 50% of oxygen. The ppm range can be switch at 10.000/ 1.000/ 100/ 10 ppm and the % range at 25/ 2,5/ 0,25 % O₂.

☺ Sensor

The OxyTrans uses a special fuel cell to measure the oxygen concentration. The sensor meets the industrial requirements for accuracy, sensitivity, easy to use and operating life.

☺ Calibration

The calibration of the instrument for trace oxygen measurements in gas, should be done with a calibration gas. The concentration can be chosen freely within the measuring range. In the percent range the unit can calibrated with air. A zero set point is also possible.

☺ Features

- ✓ compact
- ✓ inexpensive
- ✓ switching ranges 10.000ppm to 10 ppm
- ✓ storage cost from 4 to 1 device reduced
- ✓ Sensor with long operating life
- ✓ IP65 enclosure
- ✓ reverse voltage protection and temperature compensation
- ✓ No cross sensitivity to H₂
- ✓ zero calibration for measurement in low ppm rang

☺ Flow-through measuring cell in Stainless Steel

- The measuring cell is modular and is made of stainless steel
- A defective measuring cell can be repaired by replacing the defective part only, rather than the complete unit
