Technical Data Ex9TR DO / IO / F

Single-function time relay

Functions

Ex9TR DO 1CO - Delay ON

When the supply voltage is applied, the time delay T begins. At the end of the timing, the relay closes and this state lasts until the supply voltage is disconnected.

If the control contact is closed and then the supply voltage is connected, the relay is open and the timing does not start until the control contact is opened. When the timing is over, the relay closes. If the control contact is closed during timing, the timing is interrupted and does not resume until the control contact is opened.

Ex9TR IO 1CO - Interval ON

When the supply voltage is applied, the relay closes and the time delay T begins the end of the relay timing opens and this state lasts until the supply voltage is disconnected.

If the control contact is closed and then the supply voltage is connected, the relay closes and the timing does not start until the control contact is opened. After completion of the relay timing opens. If the control contact is closed during timing, the timing is interrupted and does not resume until the control contact is opened

Ex9TR F 1CO - Flasher

When the supply voltage is applied, the relay closes and the time delay T begins the end of the timing opens the relay and the time delay T runs again. After the end the relay timing closes again and the sequence is repeated until the supply voltage is disconnected.

If the control contact is closed during timing, the timing is interrupted and does not resume until the control contact is opened.

Note: The relays are initiated by the supply voltage, ie it performs 1 cycle when the voltage is applied.
