SILVER2

The New Generation

Silver2 is the new generation of belts made with materials of the highest quality and resistance, to ensure higher levels of performance and an improved power transmission.

- Increase of power load capacity by up to +50%
- Interchangeability with other deep profile systems
- Available in 8M and 14M pitches

POWERING GLOBAL INDUSTRY

SILVER2
The New Generation

MORE PERFORMANCE, SAME PRICE
Silver2 offers a wealth of improved properties at the same price.
An innovative rubber compound, reinforced with a special fibre content, giving a better tooth strength, and with a shear-resistant nylon fabric cover, giving a lower coefficient of friction, can grant an higher power rating up to +50% over existing Silver belt range.

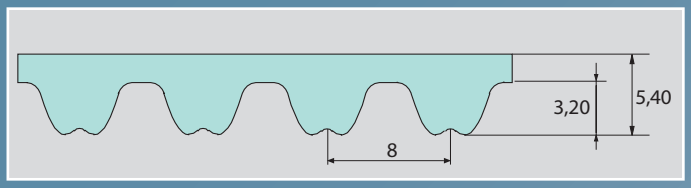

INTERCHANGEABILITY
Retains the RPP tooth profile of the existing Silver, a new Silver2 continues to give a full functional interchangeability with other deep profile systems.
The existing RPP or Silver systems can be upgraded without replacing the pulleys.
In addition, the more compact dimension, because of improved performances, optimises space utilisation and cost, for all new drive systems.

MECHANICAL AND CHEMICAL CHARACTERISTICS
- Extreme resistance to abrasion
- Self-lubricating surface
- Low coefficient of friction
- Exceptional level of resistance to flex fatigue
- Medium resistance to water, environmental agents and greases

Silver2 working temperature -25°C/+80°C
