

VSI - Upgrade - Features

Custom setup of the „U“ preamplifier:

The „Custom“ setup of the „U“ preamplifier can be done individually in customers applications.

This option gives customers the opportunity to upgrade existing VS flowmeter versions W, L and N to the higher performance „U“ preamplifier independently.

Further it is no longer necessary to send VS flowmeters with defective preamplifiers back for service, because as of now a preamplifier replacement can happen on site.
