

Filtration and Separation Limited

Fuel filter elements suitable for low flow*

Suitable for low flow fuel oil systems, e.g. high / medium speed diesel, gas/steam turbines & compressors.

- High specification filter media
- Precision pleat spacing and support media
- High collapse pressure option
- Generous dirt holding capacity
- Heat sealed media joints
- Media deep bonded end caps
- Metal components finished in high temp.coating
- Nitrile end seals of our proven “no by-pass” design mechanically secured into our end caps
- Media batch tested and recorded

Outline Element Specification	
Nominal micron retention rating	5 / 8 microns depending on specification
Max Operating Temp	120°C
Media	Specially produced even density synthetic pleated felt, unaffected by water, salt or engine acids
